

Bubble SaaS technical blueprint + build plan

Prepared by Nakul as an independent freelancer/sole proprietor for birthcoachuk / Marley. This is a paid discovery/architecture milestone that can roll into implementation if the boundaries are approved. This is not medical, legal, privacy, or regulatory advice, and not a promise of compliance certification.

Buyer	birthcoachuk / Marley
Opportunity	Bubble SaaS MVP for maternity professionals with roles, Stripe, email, PDFs, scheduling, invoicing, and localization.
Package	USD 1,500 fixed blueprint; implementation quoted after boundaries and MVP scope are approved - Bubble SaaS technical blueprint + build plan
Path	Public email listed in the Bubble post. Keep as discovery/blueprint before implementation.

Fit

The brief is high-value but touches healthcare-adjacent workflows, payments, PDFs, localization, and user roles. A blueprint reduces build risk.

Area	Support deliverable
1	Bubble data model draft for users, clients, sessions, invoices, PDFs, and status records
2	Role/privacy map for maternity professionals, admins, and customer-facing views
3	Stripe, email, PDF, scheduling, localization, and notification integration plan
4	Compliance and data-boundary question list to resolve before build
5	MVP milestone plan with acceptance criteria and implementation quote range
6	Technical risks memo covering scalability, privacy, and no-code maintainability

Boundary

No client/patient private data should be shared by email; use dummy personas, workflows, and sample documents until a secure workspace is approved.

USD 1,500 fixed blueprint; implementation quoted after boundaries and MVP scope are approved	Send dummy workflows, target user roles, and the must-have MVP screens; no private client or patient data needed.
