

# Limited Launch-QA, Accessibility, and CMS Handoff Support

Prepared by Nakul as an independent freelancer/sole proprietor for the Town of Duck website redesign and CMS implementation RFP. This is a narrow support proposal for QA evidence, migration spot checks, retest notes, and staff publishing guardrails. It is not a full redesign bid, legal certification, hosting proposal, CMS license, or long-term maintenance contract.

|         |                                                                                                               |
|---------|---------------------------------------------------------------------------------------------------------------|
| Buyer   | Town of Duck, North Carolina                                                                                  |
| RFP     | Website Redesign and Content Management System Implementation                                                 |
| Package | USD 6,800 fixed launch-QA/accessibility/CMS handoff sidecar                                                   |
| Inputs  | Priority pages, representative PDFs/forms/events, staging access after approval, and preferred tracker format |

## RFP-Specific Fit

- WCAG-oriented QA around templates, mobile views, keyboard path, focus, headings, labels, alt text, contrast, forms, and link purpose.
- Content migration spot checks for redirects, page titles, metadata, broken links, public documents, search results, and high-use resident/visitor paths.
- Issue register that separates found issues, remediated items, open risk, retest result, and likely owner.
- Staff publishing checklist for maintaining accessible pages, links, images, forms, calendar/event entries, and PDFs after launch.

## Deliverables

| Area                | Support deliverable                                                                                                |
|---------------------|--------------------------------------------------------------------------------------------------------------------|
| Scope sample        | Agreed representative URLs, mobile views, public documents, forms, calendar/event views, and service paths.        |
| Accessibility QA    | Automated scan triage plus manual verification for core WCAG-oriented risks and staff-created content patterns.    |
| Migration readiness | Spot checks for redirects, titles, metadata, document labels, search results, linked files, and broken-link risks. |
| Retest tracker      | Issue register with severity, evidence note, likely owner, status, retest result, and launch-readiness note.       |
| Staff handoff       | Concise publishing checklist and support notes for non-technical staff maintaining accessible content.             |

## Boundaries

- This is a QA, retest, and staff-handoff support package, not legal certification of ADA compliance.
- This does not include full redesign, CMS development, hosting, licensing, custom remediation, or long-term maintenance unless scoped separately.
- The work can support the Town directly or support the selected website/CMS vendor as an independent sidecar.
- No resident records, credentials, analytics exports, or internal Town files are needed by email.

|                        |                                                                                                                                                            |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Fixed price: USD 6,800 | Next step: confirm whether this limited sidecar is responsive, then share the issue-register template and staff checklist format before award discussions. |
